Work Begins On Traffic Dictionary

Compilation of a "Dictionary of Highway Traffic" is now being undertaken by the Traffic Institute of Northwestern University and the Bureau of Public Roads, U. S. Department of Commerce.

The project is under the direction of James Stannard Baker, director of the Traffic Institute's Research & Development Division.

"At present there is no single standard street and highway traffic reference which contains definitions of all the technical terms used," said Mr. Baker. "In fact, the differences in meanings of terms as used by various agencies cause confusion. The project aims to review existing published definitions, compare various definitions of single terms, and recommend the most systematically logical one."

It is expected that the new "Dictionary of Highway Traffic" will be most useful to editors, writers, students, police, lawyers, engineers, and others in the street and highway traffic field, and may set standards which will be adopted by general dictionary publishers.
